READ ME FIRST

1. After completing the unpacking and uncrating of the cabinet, you will find the Owner’s Manual, TV installation hardware, and the wireless remote all together and sealed in a clear plastic envelope and affixed to the inside of the cabinet for easy access.

2. To insure safety and security during shipping, we package the wooden and/or glass shelves that come with some cabinets, along with the TV mounting brackets (2) under the main cabinet, and then we secure this with heavy duty strapping so it remains secure in shipping.

3. To access this package of parts, simply tilt the cabinet back on its edge and using a box cutter, cut the strapping as close to the underside edge of the cabinet as possible, releasing the package. Pull the package out and set the cabinet back down on its base. CAUTION: At least two people should be involved when tilting the cabinet back on its edge and always use great care when tilting the cabinet back on its edge to access the parts package.

4. Prior to starting the TV installation process we recommend you write down the serial number for the cabinet which can be found on the 3x3 white rectangular label affixed prominently on the inside of the cabinet under the lid. The bottom line set of numbers on this label is the cabinet serial number.

5. We also recommend that you write down the serial number of the electronic control box that powers your lift. The control box is mounted inside the cabinet in the back and at the base of the main cabinet. Serial number is on the label on the control box and is located next to the SN: on the label. The control box serial numbers are a 3 alpha 9 numeric sequence.

See Warranty Registration on page 11 of the manual for more information.

About Your Touchstone TV Lift Cabinet: Product Features

Congratulations on your purchase of a Touchstone TV Lift cabinet! We take pride in the quality of our cabinet craftsmanship and the smooth functionality of our TV Lift mechanism. Please take a few minutes to learn about the major features and benefits of your TV Lift cabinet as that will insure you get the optimum use and performance from your new purchase.

Storage Space:
Our full-size and mid-size cabinets come with ample storage space in the base of the main cabinet for placing your components. Cable boxes, DVR/DVD players, video game consoles, can all be placed on the bottom of the cabinet and you can access the cords from the rear of the cabinet, using the handy slide panels in the back of the main cabinet.

• Side cabinets for additional storage are available for all of our full-size cabinets.
• Each full-size and mid-size cabinet comes with additional storage areas in the front for storing DVDs, CDs, books, video games, etc.
• Each full-size and mid-size cabinet comes with adjustable shelves. The shelves can be installed and placed at desired heights in the cabinet by placing the shelf clips into pre-drilled holes. This is the same procedure for setting the shelves in the side cabinets as well.
• If you purchased one of our 73000 series end-of-bed TV Lift cabinets, it comes equipped with a built-in component shelf which has room for at least two components, and raises and lowers with the lift, providing you with perfect line of sight and easy access to your cable box, DVD/DVR player, etc.
About Your Touchstone TV Lift Cabinet: Product Features

Other Features Common to All Touchstone Cabinets:
• Cable management system that protects and manages wires while keeping the system neat, clean, and organized. Simply connect the components to the TV and “snake” the wires through our mesh “snake-skin” system to keep them well organized and away from the lift mechanism.
• All cabinets come with adjustable feet in all four corners of the cabinet. These can be used to raise/lower the cabinet, and to level the cabinet so that all doors and lid operate smoothly.

Additional Cabinet Features (unique to certain cabinets only):
• Our transitional series of cabinets that have glass fronts come with internal lights that operate by simply touching the hinges on the doors.
• Our Adonzo 70052 media cabinet comes with a pull down speaker mesh compartment in the front of the main cabinet that is perfect for placing a Center Channel speaker, a 3.1 Sound Bar, or a video console.
• Our Adonzo 70052 media cabinet also comes standard with a wood front or mesh fronts, so you can mix/match depending upon your audio-visual requirements for your system.
• Our 73000 series cabinets come with a built-in component shelf that can store at least two (2) components.

Basic Lift Mechanism Features:
• Lift mechanism comes fully assembled and ready for TV mounting (see the Mounting TV section).
• The Quick Connect mounting plate makes TV installation a 15 minute procedure.
• Our lift is very quiet because it operates on low voltage actuators (think pistons that go up and down).
• Our lift is durable. It is a closed system so dust, dirt, and other debris cannot enter the lift mechanism which means long life and high durability.
• Our unique tri-roller ball feature gently and smoothly raises and lowers the lid of your TV Lift Cabinet, saving wear and tear on your lid, and providing a soft and safe closure.

IR Repeater Kit:
An IR repeater kit that will allow you to operate your components even if they are behind closed doors is an option for purchase by contacting your Touchstone dealer or retailer. Request P/N 70012.
Safety

Installing your Flat Screen TV in your Touchstone TV Lift cabinet is fast and easy. Operating your lift is very straightforward. However, to avoid the risk of personal injury and to insure optimum performance of your TV lift mechanism, please pay particular attention to the warnings and safety notices throughout this manual.

IMPORTANT SAFETY and PRE-INSTALLATION INSTRUCTIONS

1. Please adhere to the proper installation procedure as detailed in the installation instructions.
2. Safety precaution measures must be practiced at all times during the installation of this product.
3. The entire installation instructions should be fully read and understood before beginning installation.
4. At least two qualified people should always perform the installation work. Please take care when handling your flat screen TV as injury and damage can result from dropping or mishandling of the TV.
5. Plasma screen TV’s should remain upright at all times. Never place screen face down on the floor. This could cause damage to the TV.
6. The stand on your flat screen TV is removable! Please remove prior to installing the TV on the lift.
7. Carefully measure all dimensions on your LCD, PLASMA, or OLED TV before proceeding. Then consult our handy Dimensions Chart in the back of the Owners Manual for maximum TV size guidelines for each of our TV Lifts.
   IMPORTANT: After installing your TV on the lift, check to see if there is enough room for accessory components in the bottom area of the cabinet before placing them inside.
8. All cords connecting components to the TV and/or the Control Box should be a minimum of at least 60" (5 feet) in length.
9. Keep hands, arms, and fingers away from the lift and the cabinet lid opening when the lift is in motion.
10. Clean lift mechanism unit with a dry cloth only. Never use water or liquids on the lift mechanism.

Please see Setting the Security/Child Safety Feature Section on Page 9 of the Manual.

Contact Touchstone Customer Service at 1-800-215-1990 for any questions regarding the operation of your TV Lift cabinet.

Or consult our web site at www.touchstonehomeproducts.com/serviceandsupport.
Additional Instructions for the 73000 Bedroom Series

Every effort has been made to insure that your Touchstone TV Lift cabinet arrives in perfect condition and ready to go.

However, on rare occasion, the installed metal component shelf may get slightly misaligned during transit.

Inspect the shelf to make sure it is not touching the cabinet.

Align shelf by adjusting side screws on the connecting side arms as well as screws on the top of the lift.
Lift Components & TV Installation Hardware

Components:

- Lift Unit
- Quick Connect-TV Mounting Brackets/Plate
- Control Box (FTL-PS01)
- Wireless Remote Control
- Manual Switch
- Power Cord

Hardware:

A. Socket Head Cap Bolt
   1. (M4 x 16mm) 4 PCS
   2. (M5 x 16mm) 4 PCS
   3. (M5 x 20mm) 4 PCS
   4. (M5 x 25mm) 4 PCS
   5. (M6 x 20mm) 4 PCS
   6. (M8 x 20mm) 4 PCS
   7. (M8 x 25mm) 4 PCS
   8. (M8 x 30mm) 4 PCS

B. Butterfly Bolt with Robber Head
   (M6 x 16mm) 2 PCS

C. L Bracket
   2 PCS
Mounting and Installing the TV

An brief instructional video and demonstration on how to install your TV is available at www.touchstonehomeproducts.com under the “Service & Support” Tab.

IMPORTANT: Remove the stand that is attached to your flat screen TV. Carefully measure all dimensions on your TV before proceeding. Do not exceed maximum TV dimensions for your cabinet. See Dimension chart in back. If your TV dimensions correspond to the max TV dimensions specified, or is close to the max size, you may not have room for components in the base of your cabinet and will need to place them in a side cabinet. Please follow the installation instructions carefully to protect your TV and components.

Step 1: Lean your flat screen TV on its edge against a sofa or other soft surface.

Step 2: Find the 4 mounting holes on the back of your TV and then choose the 4 screws from the hardware pack that works best for your TV and prepare to affix the TV mounting brackets (2) provided onto the back of the TV.

Step 3: Fix the TV mounting brackets to the TV.

Step 4: Prepare to mount the TV. Plug in the lift and raise it to the full height of it is fully extended. For optimum performance of your lift and to insure that the roller balls are gently lifting the lid (not the top of the TV), when mounting your TV on the mounting plate the top of your TV should be no higher than level with or slightly below (1/4 or more) the roller balls on top of the lift.

IMPORTANT: Always mount your TV on the bracket first and check for clearance before setting any components into the base of the cabinet. Once you hang your TV on the bracket, bring the lift to its full down position, and from there determine how much clearance you have for components in the base of the cabinet.
Step 5: Hang the TV with brackets to the mounting plate. First, hang the top of two brackets to the mounting plate. After the top brackets hook to the horizontal rail, slowly release the TV to make sure it is firmly hooked on.

Step 6: In your hardware pack, locate the butterfly bolts and L Brackets. Using Figure Three as a guide, slide the L bracket through the slot on the TV Mounting Bracket. Next, secure the mounting bracket to the mounting plate using the butterfly bolt. See Figure 3.
Additional Component Integration Features

The Touchstone control box comes equipped with additional input/output features that allow you to connect external devices such as high-end amplifiers, automated systems such as Crestron, and other devices that you can operate using your Universal remote.

The control box can be connected to your automated system using the 12V trigger input. The input connector on the control box is a standard RJ-45 Connector. See figure 1 for pinout of 12V trigger input connector.

*The 12V Trigger input on the control box can be used to connect high-end amplifiers that can be programmed to operate your TV and your lift. In other words, by connecting your amplifier to the control box using the 12V Trigger input, turning on your amplifier will “trigger” the lift to go on.*

</tr>
<tr>
<td>4</td>
<td>+12V</td>
</tr>
</tbody>
</table>

**NOTE:** The current for the 12V trigger port has to be less than 800mA.

You can also use the RS232 serial connection to control the lift. The input connector on the control box is a standard RJ-45 connector. The pinout of the connector is illustrated in Figure 2. The instruction set is listed on Table 2.

*RS-232 is a standard communication protocol that is widely used to connect various devices to external controllers. Automated theater systems such as the Crestron system, for example, can be connected to the control box via the RS-232 connection, and a single device can operate the TV, raise the lift, operate the AV systems, etc.*

Table 2 RS232 connection instruction set
Operating the TV Lift

Plug the TV Lift control box into a nearby wall outlet. The lift will automatically retract to the lowest position and be ready for you to start programming the lift as desired.

Raising/Lowering the Lift:
1. Using the wireless remote, you can raise and lower the lift.
2. The height you set using the manual switch (above) will be the default maximum height that the lift will go to using the wireless remote.
3. Except for the manual switch, all other input devices (universal remotes, 12V trigger, RS-232, IR remotes, etc.) will only operate the lift within the pre-set ranges that were programmed above using the manual switch.
4. To raise the TV, press the “UP” button on your wireless remote.
5. To lower the TV, press the “DOWN” button on your wireless remote.
6. To stop the lift when it is either going up or down in the set range, simply press either the “UP” or “DOWN” button on the wireless remote and the lift will stop immediately.

Setting the Lift Height:
1. Make sure the lift is at the lowest position, fully down.
2. Locate the manual switch.
3. Press the “UP” button on the manual switch.
4. When the lift reaches the desired height for optimum viewing and comfort for your, press either the “UP” or “DOWN” button on the manual switch and the control box will memorize and store that height.

Connecting Components:
The control box comes equipped with 2 switched AC receptacles that you can plug components into.

If you choose to use the outlets, please note that each time you raise or lower the lift, any component plugged into the outlets will be powered on or off.

For certain components that may have long reboot/restart times such as Cable Boxes, Satellite Receivers, or DVRs, you may find it more efficient to plug those components directly into the wall outlet or into a power strip that sits on the floor of the cabinet.
Setting the Security/Child Safety Feature

Note: All security settings must be set by the handset (manual switch) located inside the cabinet. Handsets are located in the back of the 73000 Bedroom Series and in the front of the cabinet in the Mid and Full Size Cabinet Lines.

Security/Child Safety Feature (Lock Mode):
To enable this feature the lift must be lowered to its lowest position. Press the DOWN button on the handset and hold for approximately 5 seconds to enable the Security/Child Safety Feature (Lock Mode). The LED indicator on the control box will flash quickly in orange and you will hear a single beep indicating the Lock Mode is enabled. All the lift controls (handset, remote controls, 12V trigger and RS-232 port) are disabled. The orange light will continue to blink quickly as long as the lift remains in Lock Mode.

NOTE: Release the DOWN button on the handset once you hear the first beep. If you continue to hold the DOWN button and hear a second beep then you have performed a different function (Pairing New RF Remote to Control Box) and the Security/Child Safety Feature will not have been activated.

Active Mode:
The lift controls can be enabled temporarily for 5 minutes when the lift is in Lock Mode. Press the DOWN key once and the UP key twice to enable the Active Mode temporarily. The LED indicator on the control box will flash slowly in orange and you will hear a short beep indicating the Active Mode is enabled. All the lift controls (handset, remote controls, 12V trigger and RS-232 port) will be enabled for 5 minutes; after this period of time the lift will automatically switch back to Lock Mode. While in Active Mode the orange indicator LED will flash slower than when the lift is in Lock Mode.

Disabling the Security/Child Safety Feature (Lock Mode):
Press the UP button once and the DOWN button twice on the handset while the lift is in Lock Mode to disable the Security/ Child Safety Feature (Lock Mode). The LED indicator on the control box will turn solid green and you will hear two beeps indicating the Lock Mode has successfully been disabled. All the lift controls (handset, remote controls, 12V trigger and RS-232 port) will be enabled.
Remote Control Information

Pairing New RF Remote to Control Box:
If your wireless RF remote is missing or damaged, you can obtain a new one simply by contacting Touchstone directly at 1-800-215-1990. Before using your new RF remote, you will need to “pair” this remote to your control box. The easy instructions for programming the new/replacement RF remote are listed below.

NOTE: The process below only works with the manual switch.

1. Retract the lift to the lowest position by pressing the “DOWN” key.
2. Hold the “DOWN” button on the manual switch for at least 10 seconds. You should be able to hear 2 beeps and the LED indicator is flashing green and red on the control box, the control box is on the RF remote learning mode now.
3. Press the “DOWN” button on the RF remote control within 3 seconds to send the remote identity to the control box.
4. Once you hear 3 beeps from the buzzer, it means the learning process is successfully completed. You can start to use the new remote now.

Remote Control Battery Replacement:
If the remote stops working it is likely that you need to replace the battery. Simply remove the back panel and replace batteries. Remotes require 2 each CR2032 batteries to operate.

RF remote battery: CR2032 x 2
Troubleshooting

The control box for the Touchstone TV Lift has the capability of self-diagnosing. The buzzer and LED indicator on the control box can generate noise and display error codes if the lift is not running normally. Please refer to the Error Code chart below to solve basic errors.

Please do not disassemble and try to fix the TV Lift by yourself if the solution is not mentioned in the table below.

<table>

Touchstone Home Products Limited Warranty

Warranty Coverage:

Touchstone Home Products, Inc warrants the lift mechanism and control box units to be free of defects in material and workmanship for one year. Touchstone will repair or replace any lift mechanism and/or control box unit that is defective or becomes defective during normal use within one year after the date of purchase.

Touchstone does not warrant its products against damage caused by third parties.

The warranty does not cover paint scratches, cosmetic blemishes, or other normal wear and tear associated with the cabinet.

Extended warranty coverage for the lift mechanism is available by contacting Touchstone directly at 1-800-215-1990.

Warranty Registration:

To register your Touchstone TV Lift cabinet, please go to our website at www.touchstonehomeproducts.com/serviceandsupport.

Prior to registering, make note of your cabinet serial number which can be found on the 3x3 white rectangular label affixed prominently on the inside of the cabinet under the lid. The bottom line set of numbers on this label is the cabinet serial number.

Also note the serial number of the electronic control box that powers your lift. The control box is mounted on the cabinet in the back and at the base of the main cabinet. Serial number is on the label on the control box and is located next to the SN: on the label. The control box serial numbers are a 3 alpha 9 numeric sequence.
IR Repeater

All of our full size and mid-size line of TV Lift cabinets manufactured after 9/1/09 come “IR-ready,” with a built in IR eye, so that you can hide your components behind closed doors, yet be able to operate them via remote simply by pointing your component’s remote toward the built-in eye.

To make your “IR ready” Touchstone TV Lift cabinet IR operational, you will need the Touchstone IR Repeater Kit, P/N# 70012, which is available from your retailer/dealer or at www.touchstonehomeproducts.com.

The IR repeater kit comes with 3 emitters, an emitter control box, and an extra IR eye. The Touchstone IR Repeater Kit is all you need to be able to operate all of your components from one central “IR-ready” eye, which has been pre-installed and is conveniently located in the upper right corner of our full and mid-size main cabinets. If you plan on placing components in your side cabinets as many people do, the 3 emitters in the kit can handle that type of configuration.
